MARKETING DUE DILIGENCE • STRATEGIC DECISION CASE • 2026-09-14

Company A: From Invisible to Indispensable

Company A is currently facing a significant competitive disadvantage in the AI content marketing space. With a GEON score of 31/100 and a competitive exposure of 100/100, the brand is overshadowed by competitors like HubSpot Content Hub and Jasper. The brand's absence from AI engine responses and a campaign intelligence score of 12/100 highlight the urgent need for strategic improvements. To capture market share and convert free-trial signups into paid plans, Company A must enhance its AI visibility and address competitive control.

12

Campaign Intelligence Score

31

GEON Score

0%

AI visibility

100

Competitive exposure

100

Decision leakage

NO-GO

NOT READY TO SCALE

Question	Answer
What is the primary business problem?	Competitive Exposure: Competitors control all measured buyer questions, with HubSpot Content Hub and Jasper leading the market.
Where is the business losing potential customers?	Buyers are lost at the Recommendation stage.
What is the strongest opportunity?	AI Engine Visibility: Improving AI engine visibility can capture market share as the brand currently holds 0% visibility.
What should the company do first?	Obtain who receives and works a new lead.
What should it avoid doing?	Do not invest in SEO content yet as there are no measured organic positions to improve on.
What commercial result should this create?	The strategy exists to convert self-serve trials into 6-month paid contracts and grow monthly recurring revenue, with Agency-tier accounts as the highest-value segment, measured as qualified leads traceable to the buyer questions this plan targets.

Executive verdict

The campaign is classified as DO NOT SCALE due to severe competitive exposure, critical decision leakage, and a low campaign intelligence score, indicating that scaling would not be effective at this stage.

Primary risk

Severe Competitive Exposure: With a competitive exposure score of 100, the brand is at risk of being overshadowed by competitors in all buyer questions.

Primary opportunity

AI Engine Visibility: Improving AI engine visibility can capture market share as the brand currently holds 0% visibility.

Decision principle

Do not invest in SEO content yet as there are no measured organic positions to improve on.

Strongest supporting evidence

best free ai tools for content writing: Google #2 measured at Top 10 AI tools for content writers · kontent.ai.

Most important missing information

Who receives and works a new lead: The sales handoff process cannot be settled without it.

Immediate recommended move

Obtain who receives and works a new lead. (client, by day 7)

Commercial North Star

Every route in this plan is judged on one outcome: Free trial signup that converts to a paid 6-month plan.

Primary conclusion: Focus on enhancing AI engine visibility and strengthening competitive control through improved SEO and content marketing efforts to capture market share and convert free-trial signups into paid plans.

Competitor-dominated prompts

\$4,270-\$42,700

Revenue at stake, per year

Core risk

Severe Competitive Exposure: With a competitive exposure score of 100, the brand is at risk of being overshadowed by competitors in all buyer questions.

Core opportunity

AI Engine Visibility: Improving AI engine visibility can capture market share as the brand currently holds 0% visibility.

Decision principle

Do not invest in SEO content yet as there are no measured organic positions to improve on.

Important: This case covers the 90-day window and the 8 of 8 sources listed in the scope strip. Nothing outside them is implied.

Strategic Executive Summary

HOW WE INTEND TO WIN OVER THE NEXT 3 MONTHS

Our Strategic View

Company A positions itself as the go-to AI content creation and publishing platform for small to mid-size businesses and marketing agencies, offering unique capabilities in multi-platform publishing and brand voice customization.

1. GEON Visibility is 7/100, which is critical for market presence.

Improving GEON visibility is essential to increase market presence and capture potential customers.

2. Competitors like HubSpot Content Hub own all measured buyer questions.

Addressing competitor dominance in buyer questions is crucial to gaining market share.

3. There is existing demand not captured worth about \$46,096/year.

Capturing this demand through targeted marketing efforts can significantly boost revenue.

Commercial North Star

A qualified free trial signup that converts to a paid 6-month plan created by a buyer who found the brand while deciding.

Demand

Buyer questions the brand is present on.

Intent

Comparison-stage answers naming the brand.

Pipeline

Qualified conversations traceable to those answers.

Revenue

Closed value traceable to the entry question.

Priority ICPs

WHO WE ARE TRYING TO WIN

Strategic segmentation: These profiles are strategic hypotheses built from measured demand, buyer questions and competitor positioning. No CRM or closed-won data was available, so each one is drawn from a different measured signal and listed as a segment to validate in the first 90 days, not as a confirmed customer profile.

ICP 1 · Marketing Managers

Profile: Marketing managers at small to mid-size businesses responsible for content strategy and execution.

Primary pain: Will the content actually sound like us?

Buying trigger: Falling behind on a publishing schedule across several platforms, or losing an hour a day to writing and posting by hand

Commercial outcome: Ease of use

ICP 2 · Agency Owners and Founders

Profile: Owners and founders of marketing agencies who manage multiple client accounts and need efficient content solutions.

Primary pain: We already pay for a scheduling tool

Buying trigger: Falling behind on a publishing schedule across several platforms, or losing an hour a day to writing and posting by hand

Commercial outcome: Ability to manage multiple clients

ICP 3 · Buyers searching "best free ai tools for content writing"

Profile: Buyers who arrive at this category through the measured question "best free ai tools for content writing". No audience analysis covered them, so the profile is read from the demand itself and carries the check below.

Primary pain: Understand and evaluate best free ai tools for content writing.

Buying trigger: The moment they start searching "best free ai tools for content writing".

Commercial outcome: A qualified conversation that began with this question.

ICP 4 · Buyers searching "using ai for content creation"

Profile: Buyers who arrive at this category through the measured question "using ai for content creation". No audience analysis covered them, so the profile is read from the demand itself and carries the check below.

Primary pain: Understand and evaluate using ai for content creation.

Buying trigger: The moment they start searching "using ai for content creation".

Commercial outcome: A qualified conversation that began with this question.

Target Market + Pain

WHERE COMMERCIAL DEMAND IS MOST LIKELY TO EXIST

Target Market	Current evidence	Commercial Pain	What They Are Really Buying	Best Initial Route
Israel		Lack of efficient multi-platform content publishing solutions.	When falling behind on a publishing schedule or losing time to manual posting.	Free trial signup through targeted channels.
India	PROOF-3, PROOF-4, PROOF-6, PROOF-7	Understand and evaluate using ai for content creation.	The brand has 4 relevant approved or website-measured proof points.	Run a measurement/proof task before creating campaign content.
Malaysia	PROOF-3, PROOF-4, PROOF-6	Understand and evaluate automated content generation.	The brand has 3 relevant approved or website-measured proof points.	Run a measurement/proof task before creating campaign content.

Lead & Sales Architecture

HOW MARKETING BECOMES REVENUE

Target ICP → Pain / Trigger → Hook → Channel → Proof Asset → Landing Experience → CTA → Qualification → Sales Conversation → Opportunity → Customer

Funnel Layer	What Must Be Defined	Commercial KPI
Target ICP	Which of the profiles above a campaign is written for.	Marketing managers, agency owners and founders who publish content themselves and have no in-house content team
Pain / Trigger	The event that makes the purchase urgent.	Falling behind on a publishing schedule across several platforms, or losing an hour a day to writing and posting by hand
Hook & Offer	The first line, and what sits on the other side of it.	Data required
Channel Route	Where the answer is published first.	Google Ads / paid search, GEO / AI visibility, Paid social
Proof & Landing Experience	The evidence the buyer needs before they will act.	Data required
Qualification & Handover	What turns a response into a sales conversation.	Free trial signup that converts to a paid 6-month plan

How a lead is defined

Term	Definition	Source
Qualified Lead	A named contact with decision-making authority or direct access to it, a problem this business solves, and a stated timeframe inside 90 days.	Proposed
Unqualified Lead	Any enquiry missing authority, fit or timeframe. Recorded and nurtured rather than passed to sales, so the sales conversion rate stays meaningful.	Proposed
Mql	A contact who has taken an action showing intent beyond browsing: a demo request, a pricing enquiry, or a second high-intent visit.	Proposed
Sql	A qualified lead that sales has accepted and scheduled a conversation with. Acceptance is the handoff, not the form fill.	Proposed
Required Lead Info	Name, company, role, contact method, the problem in their words, and how they arrived.	Proposed
Scoring Rules	Points for role seniority, stated timeframe, budget signal and high-intent page views; deductions for competitor domains and out-of-market geography.	Proposed
Lead Owner	No lead owner has been named. Until one is, leads have no single point of accountability.	Proposed
Response Time	Propose a first-response commitment inside one working day, and measure against it from week one.	Proposed
Handoff Process	Marketing passes a qualified lead with its origin, its entry question and the content it engaged with. Sales accepts or returns it with a reason within one working day.	Proposed
Conversion Event	A conversion is recorded when: Free trial signup that converts to a paid 6-month plan.	Stated
Follow Up Sequence	Three contacts across ten days through different channels, then a monthly nurture. A lead is not lost until it is worked.	Proposed
Lost Lead Reason	One of: no budget, no authority, no timeframe, chose a competitor, no response, or not a fit. Recorded every time, because it is what tells targeting from execution.	Proposed
Attribution Source	No system records where a lead came from. Campaign parameters are carried on every link so attribution becomes possible as soon as one exists.	Proposed
Entry Buyer Question	The question that brought them in. This is what connects a closed deal back to a piece of content and a demand cluster.	Proposed
Influencing Content	Every asset the lead engaged with before converting, not only the last one.	Proposed

Funnel measures

Stage	Baseline in report	Target	Owner	Decision it triggers
Reach Qualified audience reach	0%	Evidence-based · 4%	Agency	Below plan, distribution changes before the message does.
Engagement Relevant engagement rate	27	Planning hypothesis · 36	Client	Low relevant engagement means the targeting is wrong, not the creative.
Intent High-intent visits or responses	27	Planning hypothesis · 36	Client	Flat intent with rising reach means the message is not landing with buyers.
Conversion Landing page conversion rate		Directional goal	Agency	Below benchmark, the landing experience is fixed before more traffic is bought.
Qualification Qualified lead rate		Directional goal	Client	A low qualified rate means the offer attracts the wrong people; the offer changes.
Sales Meeting or consultation booking rate		Directional goal	Client	Qualified leads that never reach a conversation is a follow-up problem, not a marketing one.
Opportunity Opportunity creation rate		Directional goal	Client	A low rate here means qualification is too loose; the criteria tighten.
Closing Close rate		Directional goal	Client	A falling close rate with steady lead quality points at the sales conversation, not the campaign.
Efficiency CPL and CPA		Directional goal	Agency	Cost above target for two consecutive windows stops the route.
Revenue Pipeline and closed revenue		Directional goal	Client	Revenue below plan with healthy leads means the problem is downstream of marketing.
Attribution Revenue by question, campaign, channel and ICP		Directional goal	Client	Whichever question and channel produce revenue get the next increment of budget.

Nothing past the form is readable yet. No CRM, close rate or conversion data was available, so nothing past the form can be read yet. The architecture below is what makes it readable, and the first month establishes the baseline.

What to instrument	The first month
--------------------	-----------------

→ Define and instrument the conversion event, so a lead is a recorded fact rather than an inbox impression.

→ Add campaign parameters to every published link, so origin is captured rather than reconstructed.

→ Record lead source, entry question and engaged content at the point of capture.

→ Put qualified and unqualified into a single list with a reason on every row.

→ Record the lost reason on every closed-lost lead, which is what separates a targeting problem from a sales one.

→ Once a CRM exists, connect it so opportunity, close rate and revenue can be read against the campaign that produced them.

→ Week 1: agree the definitions above with the client and record them where the sales team can see them.

→ Week 1: instrument the conversion event and verify one test lead end to end.

→ Week 2: begin recording lead source, entry question and qualification outcome for every enquiry.

→ Week 3: review the first fortnight of leads against the qualified-lead definition and adjust it once, deliberately.

→ Week 4: report the first measured qualification rate, and set the first real target from it rather than from an assumption.

Commercial principle: Every asset names a buyer, a pain and the next step, or it does not ship.

What We Will Do **FROM DIAGNOSIS TO EXECUTION**

#	Strategic Move	Why It Matters	Expected Output
01	Improve AI visibility across engines.	GEON Visibility is 7/100, which is critical for market presence.	AI engine visibility percentage.
02	Address competitor dominance in buyer questions.	Competitors like HubSpot Content Hub own all measured buyer questions.	Share of voice in AI answers.
03	Capture existing demand through paid search.	There is existing demand not captured worth about \$46,096/year.	Paid search conversion rate.
04	Optimize landing pages for conversion.	Decision leakage is critical at 100/100, indicating loss of potential conversions.	Conversion rate from landing pages.
05	Set up comprehensive tracking and measurement.	The campaign intelligence score of 12/100 indicates a lack of data-driven insights.	Campaign Intelligence Score.

What We Would Do Now

→ Investing 25% of the budget here will improve AI visibility, currently at 0%, to capture more of the answer space.

→ Allocating 25% of the budget to optimize landing pages will address critical decision leakage, currently at 100.

→ Spending 10% on Google Ads will target high-value search terms to capture existing demand worth \$46,096/year.

→ Competitors hold more of the buying conversation than the brand does.

→ Priority level is Critical across the measured signals.

→ Campaign Intelligence Score is 12, below the 40-point floor.

What We Would Not Do Yet

→ Do not invest in SEO content yet as there are no measured organic positions to improve on.

→ Avoid significant spend on social paid as social demand is not measured, treating it as a test instead.

→ No measured organic positions to improve on; connect Search Console and run keyword research first.

→ Social demand is not measured; treat spend as a test rather than a sized opportunity.

Decision rule: Nothing is scaled until the question it answers shows measured demand and a working conversion path.

Recommended Channel Role **NOT EVERY CHANNEL HAS THE SAME JOB**

Channel	Role in the Plan	Timing	What We Expect It to Prove
Google Ads / paid search	Google Ads is prioritized at a low level because 24 demand clusters are reachable by paid search, and none are currently contested by competitors. This presents a unique opportunity to capture demand without direct competition.	LATER	Cost per acquisition at or under USD 150
SEO & content	SEO content is not recommended because there are no measured organic positions to improve on. Without existing data, it's difficult to justify investment.	NOT NOW	Top-10 positions and organic clicks on the attack clusters
GEO / AI visibility	Geo AI content is prioritized highly because the brand only holds 6.7% of measured top-3 placements, leaving a significant 93% of the answer space to competitors.	NOW	Top-3 placement share in AI answers
Paid social	Social paid is prioritized at a low level because while social is already running, there is no measurement of social demand in this report. This spend is treated as a test.	LATER	Cost per lead at or under USD 25
Organic social	Social organic is prioritized at a low level because it is already running and can carry campaign content at no additional media cost.	LATER	Engagement rate and assisted conversions from published content
Landing pages & CRO	Landing CRO is prioritized highly due to critical decision leakage, with buyers being lost before converting. Optimizing landing pages is essential to improve conversion rates.	NOW	Conversion rate at the leaking journey stage
Email & CRM	Email CRM is prioritized at a low level because it is already running and can convert demand found in this report, though its performance is not measured here.	LATER	Reply and meeting rate from the existing list
Video	Video is prioritized at a low level because there are 2 demand clusters that video answers best, but no video channel is currently running.	LATER	Completed views and assisted conversions from campaign video

The Recommended 3-Month Strategy **ONE CONNECTED SEQUENCE**

MONTH 1

Awareness and Initial Engagement

Increase brand visibility and awareness in AI content platform discussions.

Check: Is every KPI now measurable, and did the first content reach the engines?

MONTH 2

Consideration and Education

Educate the target audience on choosing the right AI content platform.

Check: Which routes produced qualified leads, and at what cost?

Act: Anything still unmeasurable becomes a named blocker with an owner, not a silent gap.

Act: Stop what missed its threshold; hold what is close; scale nothing yet.

MONTH 3

Conversion and Trust Building

Convert trial users to paid plans and build trust through testimonials. Rerun the source analysis, compare against this baseline and decide the next cycle.

Check: Did conversion improve where proof was added?

Act: Carry the answer into the day-90 gate as evidence, not as opinion. This is a formal gate: the decision is recorded.

Decision gate: Day 90 decision gate: every route is continued, changed or stopped against its stated success threshold. Routes with no measurable result are stopped rather than extended, and the freed effort is reallocated.

Why a 3-Month Plan?

Citation follows indexation and indexation follows publication; one quarter is long enough to see the first answers land and short enough to correct course before spend is committed.

Month 3 Is a Decision Point, Not an End Point

Month 3 reruns this analysis and compares it against the baseline recorded here before anything is renewed.

What Success Should Look Like FROM VISIBILITY TO PIPELINE AND REVENUE

Layer	Starting Question	3-Month Direction	How We Will Judge Progress
Commercial	Campaign Intelligence Score	12 → 27	Composite of GEON, AI visibility, recommendation share, cost exposure and share of voice. It moves as its inputs do.
Authority	GEON score	31 → 46	Assumes authority and consistency work lands across the six pillars during the plan.
Visibility	AI engine visibility	0 → 4	Assumes the campaign's content is published and indexed against the tested buyer questions.
Demand	AI recommendation share	6.7 → 17	Ranking-based proxy: the share of AI answers placing the brand in the top three.
Visibility	Share of voice in AI answers	0 → 4	Share is zero-sum, so gains here require displacing a competitor from answers they currently hold.
Visibility	Organic clicks (window)	27 → 36	Assumes near-growth queries move onto page one and under-clicked pages get title and snippet work.
Visibility	Average organic position	9.7 → 7.3	Weighted across all measured queries; concentrated gains on target clusters move this slowly.
Conversion	Decision leakage	100 → 85	Falls as content covers the journey stages where the brand is currently absent.
Commercial	Search cost exposure	No baseline	No baseline: no keyword cost data is available for this domain.

Our Role

We hold the intelligence, the sequence and the measurement; the client holds the proof and the sales conversation.

“Presence is not the goal. Being the answer is.”

Evidence discipline: Every figure in this case is either counted from a source, computed from counted inputs through a stated formula, or marked as not measured. Nothing is filled in to make a section look complete.

Critical Conditions Before Scale

WHAT MUST BE TRUE

Do not hide the missing data. 9 conditions are listed here rather than filled in.

#	Gate	Current evidence	Decision implication	Status
1	Competitive position	Competitors hold more of the buying conversation than the brand does.	Competitors hold more of the buying conversation than the brand does.	Critical
2	Priority level	Priority level is Critical across the measured signals.	Priority level is Critical across the measured signals.	Critical
3	Campaign intelligence score	Campaign Intelligence Score is 12, below the 40-point floor.	Campaign Intelligence Score is 12, below the 40-point floor.	Critical
4	Decision leakage	Decision leakage is critical (100), so buyers are being lost inside the journey.	Decision leakage is critical (100), so buyers are being lost inside the journey.	Critical
5	Competitive exposure	Competitive exposure is severe (100).	Competitive exposure is severe (100).	Critical
6	Fix before launch	Competitors hold more of the buying conversation than the brand does.	Blocks measurement of anything that follows.	Needs attention
7	Fix before launch	Priority level is Critical across the measured signals.	Blocks measurement of anything that follows.	Needs attention
8	Fix before launch	Campaign Intelligence Score is 12, below the 40-point floor.	Blocks measurement of anything that follows.	Needs attention
9	Fix before launch	Decision leakage is critical (100), so buyers are being lost inside the journey.	Blocks measurement of anything that follows.	Needs attention

Inputs we do not have

Not invented. Each of these is a dated task with an owner rather than a gap in the report. The decision named beside it stays open until the input arrives.

Severity	What is missing	Task	Owner	Due	Decision it blocks
IMPORTANT	The split between media spend and production cost A budget quoted as a single figure hides whether it has to cover asset production, which changes what the plan can commit to producing.	the client states what share of the budget is ad spend rather than production	Client	By day 14	Production volume in the content plan
BLOCKING	Who receives and works a new lead A lead with no named owner is a lead nobody is accountable for, and no handoff process can be defined around it.	the client names the role that owns incoming leads	Client	By day 7	The sales handoff process
IMPORTANT	The committed first-response time for a new lead Response time is one of the few conversion levers the agency does not control and the client does; without it, lead quality and sales follow-up cannot be told apart when results disappoint.	the client commits to a first-response time	Client	By day 14	Attribution of poor conversion to marketing or to follow-up
IMPORTANT	Whether a CRM is in use, and which one Revenue attribution back to a campaign, a channel and a buyer question needs a system that records the lead's origin. Without one, the plan can measure to the conversion and no further.	the client confirms the CRM in use, or that there is none	Client	By day 14	Revenue attribution by campaign and buyer question
IMPORTANT	The typical time from first contact to closed business It decides when pipeline results can first be judged. Reading revenue too early makes a working campaign look like a failing one.	the client provides a typical sales cycle length	Client	By day 14	When the first revenue decision gate can be read
IMPORTANT	Access to existing customer records for profile validation Buyer profiles built without customer data are hypotheses. Validating them against real customers is what turns targeting from a guess into a decision.	the client shares customer records, or confirms none can be shared	Client	By day 30	Confirming the priority buyer profiles

Market Position & GEON

WHERE THE BRAND IS STRUCTURALLY WEAK

Strategic reading

Company A has a strong trust foundation, scoring 71/100 in trust, which can be leveraged to build customer confidence and drive conversions. However, the brand's visibility is critically low at 7/100, indicating a need for immediate action to improve recognition and authority in the market.

Pillar	Brand	Competitor benchmark	Delta	Difficulty	Strategic use
trust	71	71	0	Neutralizable	Ahead of the strongest tracked competitor on Trust. This is a position to defend, not close.
authority	50	78	-28	Hard	Authority depends on third-party signals (citations, reviews, coverage) that accumulate over months rather than campaign cycles.
visibility	7	65	-58	Recoverable	Visibility is content- and publishing-driven, so it responds inside a campaign window.
context	39	82	-43	Recoverable	Context is content- and publishing-driven, so it responds inside a campaign window.
consistency	88	63	25	Neutralizable	Ahead of the strongest tracked competitor on Consistency. This is a position to defend, not close.
marketFit	37	72	-35	Recoverable	Market Fit is content- and publishing-driven, so it responds inside a campaign window.

Competitor Control

WHO CURRENTLY OWNS THE DECISION SURFACE

Key finding: Competitors hold 14 of 14 measured buyer questions outright, led by HubSpot Content Hub with 10.

Competitor	Tier	Share	Owns outright	GEON	Implication
HubSpot Content Hub	Main	23.1%	10	Not measured	HubSpot Content Hub holds a dominant position with 23.1% share and controls 10 buyer questions outright. Their stronghold is a significant barrier to Company A's market entry.
Jasper	Main	20.8%	10	54.9	Jasper, with a 20.8% share, also owns 10 buyer questions outright. Their established presence makes them a formidable competitor in the AI content platform market.
Writesonic	Main	15.9%	10	43.7	Writesonic holds a 15.9% share and controls 10 buyer questions. This competitor's presence further complicates Company A's entry into the market.
Sight AI	Direct	11.7%	10	44.6	follower
Surfer SEO	Direct	11.4%	10	Not measured	follower
MarketMuse	Direct	7.4%	10	Not measured	follower
Floyi	Emerging	4.2%	10	Not measured	niche
Empler AI	Emerging	3%	8	31.8	niche

0%
Implication
The brand is experiencing critical decision leakage at the recommendation stage, where it is completely absent from buyer questions. Competitors dominate this stage, capturing nearly all inquiries.

Management risk: Spending upstream while the recommendation stage leaks amplifies the loss rather than offsetting it.

AI + Search Intelligence

TWO DIFFERENT VISIBILITY SYSTEMS

0%

Engine visibility

6.7%

Recommendation share

27

Search Console clicks

9.7

Average position

Engine visibility counts answers that name the brand; recommendation share counts top-3 placements inside those answers. Google figures come from Search Console and measure a different system entirely.

Engine	Visibility	Top-3 placement	Share	Sentiment	Narrative status
ChatGPT	0%	0	0%	Neutral	ChatGPT does not mention Company A and provides a general guide on choosing AI content platforms, focusing on other providers like Jasper and Writesonic.
Claude	0%	1	11.1%	Positive	Claude does not mention Company A and focuses on pricing and general advice for choosing AI content platforms.
Gemini	0%	1	14.3%	Neutral	Gemini does not mention Company A and instead highlights other platforms like theStacc and Bria as top options in Israel.
Perplexity	0%	1	5.9%	Neutral	Perplexity does not mention Company A and instead discusses general factors for choosing AI content platforms.
Copilot	0%	1	6.3%	Neutral	Copilot does not mention Company A and provides a general overview of AI content platform costs and options.
Grok	Not available		Engine not yet integrated, so no data was collected		

Google baseline

27 clicks at average position 9.7 across the window.

AI baseline

Named in 0% of tested answers, placed in the top three of 6.7%.

Search economics gate: Modelled annual cost of absence: \$3,688. Directional model based on third-party keyword cost data, not audited financial data.

Trust signals

- Trust score of 71/100
- High consistency score of 88/100

Missing trust signals

- Third-party validation from recognized industry leaders
- Positive reviews from credible sources

Authority signals

- 0% visibility in AI search results across 5 engines
- 14 out of 14 buyer questions controlled by competitors
- 0% share of voice

Missing authority signals

- Citations from authoritative sources that mention the brand
- Positive sentiment from reputable domains

Strategic implication: The lack of citations and visibility undermines the campaign's credibility. Without authoritative support, claims made in the campaign may not be believed.

Opportunity Map

WHERE THE PLAN CAN CREATE LEVERAGE

Strategic thesis

Company A positions itself as the go-to AI content creation and publishing platform for small to mid-size businesses and marketing agencies, offering unique capabilities in multi-platform publishing and brand voice customization. Company A is designed to transform how small to mid-size businesses and marketing agencies manage their content creation and distribution. By focusing on AI visibility and addressing competitive gaps, the strategy aims to position Company A as the default choice for businesses seeking efficient, scalable content solutions. The campaign will leverage the brand's unique strengths in multi-platform publishing and brand voice customization to capture market share from competitors like Jasper and HubSpot Content Hub. The primary goal is to convert free trial signups into paid 6-month contracts, thereby increasing monthly recurring revenue and establishing Company A as a leader in the AI content platform space.

01

AFTER VALIDATION

03
Create a campaign that answers 'What is the best AI content platform for my business?' highlighting Company A's multi-platform capabilities and brand voice engine.

Create a campaign that answers 'What is the best AI content platform for my business?' highlighting Company A's multi-platform capabilities and brand voice engine to differentiate from competitors.

LATER

04
Enhance authority by developing content that answers 'Is AI content platform worth it? What do reviews say?' with positive customer testimonials and case studies.

Enhance authority by developing content that answers 'Is AI content platform worth it? What do reviews say?' with positive customer testimonials and case studies to build trust and authority.

LATER

Sequence rule: Answer, then prove, then amplify. Reordering multiplies the leak rather than closing it.

Campaign Routes

WHERE TO PLAY AND WHY

Channel logic: The campaign should prioritize AI visibility and content marketing to address competitive gaps and improve market presence.

GEO / AI visibility	Winning here would significantly increase the brand's visibility in AI-generated content recommendations.	NOW Address competitive exposure before proceeding.	KPI Top-3 placement share in AI answers
Landing pages & CRO	Winning here would directly increase conversion rates and reduce decision leakage.	NOW Implement landing page and conversion rate optimization strategies before scaling traffic.	KPI Conversion rate at the leaking journey stage
Google Ads / paid search	Winning here would allow the business to capture untapped demand clusters.	LATER Ensure competitive disadvantage, priority level, low campaign intelligence, decision leakage, and competitive exposure are addressed before investing.	KPI Cost per acquisition at or under USD 150
Paid social	Winning here would provide insights into social demand and potential conversion rates.	LATER Ensure competitive disadvantage, priority level, low campaign intelligence, decision leakage, and competitive exposure are addressed before investing.	KPI Cost per lead at or under USD 25
Organic social	Winning here would increase organic reach and engagement without additional spend.	LATER Monitor engagement metrics to ensure content resonates with the target audience.	KPI Engagement rate and assisted conversions from published content
Email & CRM	Winning here would enhance customer engagement and conversion through targeted email campaigns.	LATER Monitor email performance metrics to ensure effectiveness.	KPI Reply and meeting rate from the existing list
Video	Winning here would capture demand from how-to or comparison questions effectively answered by video content.	LATER Develop video content strategy and test its effectiveness in capturing demand.	KPI Completed views and assisted conversions from campaign video
SEO & content	Winning would allow the business to own demand currently being rented.	NOT NOW Connect Search Console and conduct keyword research to size the opportunity.	KPI Top-10 positions and organic clicks on the attack clusters

AI Content Platform Options

Develop content that explores the best AI content platform options, positioning Company A as a credible choice with unique features.

If We Were Responsible for the Marketing Budget Tomorrow

If the budget were ours tomorrow, this is where it would and would not go, and why.

Channel / Capability	Decision	Prescription	Why
Google Ads / paid search	LATER	Allocate 10% of the budget to Google Ads to capture existing demand through paid search, focusing on high-value terms like 'ai for business' that are currently uncaptured.	Google Ads is prioritized at a low level because 24 demand clusters are reachable by paid search, and none are currently contested by competitors. This presents a unique opportunity to capture demand without direct competition.
SEO & content	NOT NOW	SEO content is not recommended at this time due to the lack of measured organic positions to improve on. Connect Search Console and run keyword research to size this opportunity.	SEO content is not recommended because there are no measured organic positions to improve on. Without existing data, it's difficult to justify investment.
GEO / AI visibility	NOW	Invest 25% of the budget in geo-targeted AI content to improve visibility in AI engine responses, where the brand currently holds only 6.7% of measured top-3 placements.	Geo AI content is prioritized highly because the brand only holds 6.7% of measured top-3 placements, leaving a significant 93% of the answer space to competitors.
Paid social	LATER	Allocate 10% of the budget to social paid channels as a test, given the absence of measured social demand. This spend should be treated as exploratory.	Social paid is prioritized at a low level because while social is already running, there is no measurement of social demand in this report. This spend is treated as a test.
Organic social	LATER	Continue leveraging social organic channels, which are already running, to distribute campaign content at no additional media cost.	Social organic is prioritized at a low level because it is already running and can carry campaign content at no additional media cost.
Landing pages & CRO	NOW	Invest 25% of the budget in optimizing landing pages for conversion to address critical decision leakage and improve the conversion rate from free trials to paid plans.	Landing CRO is prioritized highly due to critical decision leakage, with buyers being lost before converting. Optimizing landing pages is essential to improve conversion rates.
Email & CRM	LATER	Continue using email CRM, which is already running, to convert demand identified in the report, although its performance is not currently measured.	Email CRM is prioritized at a low level because it is already running and can convert demand found in this report, though its performance is not measured here.
Video	LATER	Winning here would capture demand from how-to or comparison questions effectively answered by video content.	Video is prioritized at a low level because there are 2 demand clusters that video answers best, but no video channel is currently running.

Competitive Chessboard

Our Move	Why This Move	Current Competitor Position	Likely Response	Prepared Counter-Move
Create a proof-backed campaign answering 'What are the best AI content platform options right now?' with a differentiated position.	Jasper, Surfer SEO, and HubSpot Content Hub currently dominate this query, but Company A has relevant proof points to challenge them.	HubSpot Content Hub: Main	HubSpot may increase their content marketing efforts to maintain their dominance in buyer questions.	Focus on creating content that specifically addresses gaps in HubSpot's offerings, such as multi-platform publishing and brand voice customization.
Develop content that answers 'How do I choose the right AI content platform for my needs?' with a focus on Company A's unique features.	Jasper and Writesonic control this decision point, but Company A's ability to generate content aimed at specific buyer questions provides an edge.	Jasper: Main	Jasper might enhance their AI capabilities to reinforce their market position.	Emphasize Company A's unique features like the brand voice engine and multi-platform publishing to differentiate from Jasper.

Campaigns We Would Launch

FROM INTELLIGENCE TO CREATIVE

Planning note: The opportunity map identifies 8 demand clusters where Company A has a measurable gap and a credible chance to win. These clusters are essential for targeting as they represent areas where the brand can potentially capture market share from competitors. However, opportunities requiring proof that does not yet exist are marked as builds, indicating the need for further development before claims can be made.

01 · AI Content Platform Comparison

Audience: Marketing managers and agency owners researching AI content platforms.

Hook: “Discover why Company A stands out among AI content platforms.”

Asset: Landing Page

Channels: wordpress, linkedin, google_business_profile

CTA: Learn more about Company A's unique features.

02 · Choosing the Right AI Content Platform

Audience: Marketing managers and agency owners evaluating AI content platforms.

Hook: “How to choose the best AI content platform for your needs.”

Asset: Article

Channels: wordpress, linkedin, google_business_profile

CTA: Explore Company A's unique features.

03 · Multi-Platform Capabilities Showcase

Audience: Businesses and agencies looking for comprehensive content solutions.

Hook: “Streamline your content management across multiple platforms.”

Asset: Video / Reel

Channels: youtube, linkedin

CTA: See Company A in action.

04 · AI Content Platform Reviews and Testimonials

Audience: Potential buyers looking for reviews and testimonials of AI content platforms.

Hook: “Hear from real customers why Company A is their platform of choice.”

Asset: Carousel

Channels: linkedin, facebook

CTA: Read our customer success stories.

Claims that must not be published yet

Hold these back. No approved proof supports these claims. They stay out of every campaign and every asset until the evidence beside them exists.

→ Capture an approved case study, metric, certification or source-backed differentiator.

No approved or measured proof supports this claim, and it is used by 20 items in the plan.

Unlocked by: The certificate or registration number, with its issuing body, owned by the client, due day 30.

Recommended Investment Architecture

How this is stated. Budget, average customer value, a target cost and a close rate were all supplied, so the plan states shares of a known budget.

GeoRepute does not set the media budget and does not undertake to lower auction CPC. The campaign manager and client control spend; this map identifies where that spend and organic effort are best directed.

Layer	Planning Share	Objective
Media budget 24 demand cluster(s) are reachable by paid search, 0 of them already contested by competitors.	10%	Cost per acquisition at or under USD 150 Smallest useful test: Run 14 days at the allocated share before judging; below that the data is noise. Stop if: Stop if cost per lead exceeds the target by more than half over a full test window. Scale when: Increase the share when cost per lead sits at or below target across two consecutive windows.
Strategic effort The brand holds 6.7% of measured top-3 placements, leaving 93% of the answer space to competitors.	25%	Top-3 placement share in AI answers Smallest useful test: Run 14 days at the allocated share before judging; below that the data is noise. Stop if: Stop if cost per lead exceeds the target by more than half over a full test window. Scale when: Increase the share when cost per lead sits at or below target across two consecutive windows.
Media budget Social is already running, but nothing in this report measures social demand. Treat spend here as a test, not as a sized opportunity.	10%	Cost per lead at or under USD 25 Smallest useful test: Run 14 days at the allocated share before judging; below that the data is noise. Stop if: Stop if cost per lead exceeds the target by more than half over a full test window. Scale when: Increase the share when cost per lead sits at or below target across two consecutive windows.
Strategic effort Organic social is already running and can carry campaign content at no media cost.	10%	Engagement rate and assisted conversions from published content Smallest useful test: Run 14 days at the allocated share before judging; below that the data is noise. Stop if: Stop if cost per lead exceeds the target by more than half over a full test window. Scale when: Increase the share when cost per lead sits at or below target across two consecutive windows.
Strategic effort Decision leakage is critical (100/100). Buyers reaching the site are being lost before converting.	25%	Conversion rate at the leaking journey stage Smallest useful test: Run 14 days at the allocated share before judging; below that the data is noise. Stop if: Stop if cost per lead exceeds the target by more than half over a full test window.

Layer	Planning Share	Objective
		Scale when: Increase the share when cost per lead sits at or below target across two consecutive windows.
Strategic effort Email is already running and can convert demand this report finds, but its performance is not measured here.	10%	Reply and meeting rate from the existing list Smallest useful test: Run 14 days at the allocated share before judging; below that the data is noise. Stop if: Stop if cost per lead exceeds the target by more than half over a full test window. Scale when: Increase the share when cost per lead sits at or below target across two consecutive windows.
Strategic effort 2 demand cluster(s) are how-to or comparison questions, the demand video answers best, but no video channel is running yet.	10%	Completed views and assisted conversions from campaign video Smallest useful test: Run 14 days at the allocated share before judging; below that the data is noise. Stop if: Stop if cost per lead exceeds the target by more than half over a full test window. Scale when: Increase the share when cost per lead sits at or below target across two consecutive windows.
Testing allocation A reserved share for validating hypotheses before they are funded at scale.		Hypotheses are confirmed or discarded cheaply rather than expensively. Smallest useful test: One hypothesis at a time, with a stated success threshold before it starts. Stop if: Discard a hypothesis that misses its threshold rather than extending the test. Scale when: A confirmed hypothesis moves into the media or production layer at the next gate.
Technology cost Conversion tracking or a CRM has to exist before any cost-per-lead figure means anything.		Every lead can be attributed to a campaign, a channel and a buyer question. Smallest useful test: One end-to-end test lead traced from click to record. Stop if: Paid spend does not begin until the test lead is traceable. Scale when: Once tracking is verified, the paid routes are released in priority order.

The order these tests run in

#	Test	What it produces	Gate
1	Put conversion tracking and lead attribution in place	Every lead carries its campaign, channel and entry question	No paid spend before a test lead is traceable end to end
2	Publish answers to the highest-intent buyer questions the brand is absent from	Whether published answers reach the engines, and how quickly	Measured presence on at least one target question before paid amplification
3	Run a contained search test on the highest-intent demand cluster	Real cost per click and cost per lead for this market	Cost per lead at or below target
4	Retarget the traffic the first two tests produced	Conversion rate for warm versus cold audiences	Retargeting converts above the cold baseline
5	Scale whichever route cleared its threshold	Whether performance holds at higher volume	Cost per lead holds within a quarter of its tested level

When this is revisited. Day 30: Cost per lead against target across the first full test window decides whether shares are held, moved or cut.

Where the Next Customer Is Being Lost

Journey Stage	Current Read	Competitor Advantage	Risk	Agency Intervention
Recommendation	Present in 0% of answers.	Competitors answer 92.6% of the questions where the brand does not appear.	The brand is not visible in any of the 108 measured buyer questions, leading to a complete loss of potential engagement.	Develop content that directly addresses buyer questions to become a recommended option.
Discovery	Not measured	Not recorded	Not recorded	Increase brand visibility in AI engine responses to capture initial interest.
Research	Not measured	Not recorded	Not recorded	Not recorded
Comparison	Not measured	Not recorded	Not recorded	Not recorded
Validation	Not measured	Not recorded	Not recorded	Not recorded
Trust	Not measured	Not recorded	Not recorded	Not recorded

What We Do Monday Morning

FIRST 90 DAYS OF EXECUTION

The first 90 days buy a baseline, not a campaign. This period is crucial for establishing foundational metrics and understanding the current landscape.

MONDAY

Competitor Analysis

Competitors hold more of the buying conversation than the brand does. Analyze competitor strategies to identify areas for improvement.

TUESDAY

Priority Assessment

Priority level is Critical across the measured signals. Focus on addressing the most urgent issues first.

WEDNESDAY

Campaign Intelligence Review

Campaign Intelligence Score is 12, below the 40-point floor. Identify key areas to improve this score.

THURSDAY

Decision Leakage Analysis

Decision leakage is critical (100), so buyers are being lost inside the journey. Investigate where and why this is happening.

FRIDAY

Measurement Agreement

Agree on the measurement the client will see every month to ensure transparency and accountability.

90-Day Delivery Plan

Window	Agency Deliverables	Client Sees	Decision Gate
Days 1-22	Best AI content platform options; Best AI content platform options; Best AI content platform options; Choosing the right AI content platform	The baseline document.	Establishes the starting point for all future comparisons.
Days 23-44	Choosing the right AI content platform; Choosing the right AI content platform; AI content platform reviews	Drafts for approval.	Allows for feedback and adjustments before going live.
Days 45-66	AI content platform reviews; AI content platform reviews; AI content platform reviews	Live pages.	Marks the transition from planning to execution.
Days 67-90	AI content platform reviews; AI content platform reviews	The first movement report.	Provides initial insights into the campaign's impact.

3-Month Growth System

MONTH 1 · Awareness and Initial Engagement

Increase brand visibility and awareness in AI content platform discussions.

MONTH 2 · Consideration and Education

Educate the target audience on choosing the right AI content platform.

MONTH 3 · Conversion and Trust Building

Convert trial users to paid plans and build trust through testimonials.

Your Marketing Operating System

Intelligence → Strategy → Campaign Architecture → Creative → Production → Distribution → Measurement → Competitive Response → Next Decision. GeoRepute holds the intelligence and the measurement; the client holds the proof and the sales conversation.

Do not automate an unclear strategy. Each item below is either recorded or it is not. Nothing here is inferred. This ensures that all data used in decision-making is based on actual measurements.

1. Objectives

- Complete: Every required objective is recorded.

2. Campaign economics

- Complete: Budget, deal value and target cost are recorded.

3. Data sources

- Complete: All 8 sources are available.

4. Blocking conditions

- Competitive position
- Priority level
- Campaign intelligence score
- Decision leakage
- Competitive exposure

5. Proof library

- Capture an approved case study, metric, certification or source-backed differentiator.

6. Tracking

- Complete: Conversion tracking and Search Console are both in place.

Go-live gate: 2 of 6 checks carry outstanding items. Publication can begin on what is already evidenced; paid spend cannot be judged until tracking reports.

Recommended role for Company A

This plan has been handed to Company A for content creation, approval, publishing and measurement. The configuration below describes what it runs on.

1. Intelligence

The approved plan and the evidence behind it.

2. Strategy

Campaigns, hooks and content directives, unchanged.

3. Production

Drafts written against the brief, not against the topic.

4. Distribution

Scheduling and publication on the approved calendar.

5. Measurement

What shipped, compared against what was approved.

What should be configured inside Company A

Configuration	What To Load	Why	Output
Campaign set	4 approved campaigns.	Keeps production tied to the plan rather than to a topic list.	Briefed content items.
Content directives	12 directives.	Each directive carries the hook, message, proof and call to action.	Drafts that execute the brief.
Platforms	wordpress, linkedin, youtube	Publication targets come from the plan, not from a default roster.	Scheduled publications.
Ownership	campaign_manager: 8, georepute: 4	Automated production only ever touches items owned by an execution layer.	A clear split between automated and human work.
Handoff	sent	The handoff record is what makes execution auditable against the plan.	A traceable execution history.

Implementation recommendation

Approve the plan first, then decide where it is produced. The strategy does not change with the execution layer.

Campaign Intelligence Action Plan

FROM FINDINGS TO OWNERS

This is a validation roadmap. Too little evidence survived the trace gate to plan a full quarter of execution. This is a validation roadmap: it closes the blocking data gaps and runs small, labelled experiments whose results decide what the next quarter funds.

Action	Channel	Owner	Priority	Effort	KPI
Obtain who receives and works a new lead. Finding: Who receives and works a new lead is not on file. What it means: Who receives and works a new lead is not currently available. The sales handoff process cannot be finalized until the client names the role that owns incoming leads. The client should complete this during the first 7 days. Gate: The sales handoff process stays blocked until this is closed.	measurement Days 1-7	Client	Critical	Low	Who receives and works a new lead recorded Unblocks: the sales handoff process.
Obtain the split between media spend and production cost. Finding: The split between media spend and production cost is not on file. What it means: The split between media spend and production cost is not currently available. Production volume in the content plan cannot be finalized until the client states what share of the budget is ad spend rather than production. The client should complete this during the first 14 days. Gate: Production volume in the content plan stays blocked until this is closed.	measurement Days 1-14	Client	Medium	Low	The split between media spend and production cost recorded Unblocks: production volume in the content plan.
Obtain the committed first-response time for a new lead. Finding: The committed first-response time for a new lead is not on file. What it means: The committed first-response time for a new lead is not currently available. Attribution of poor conversion to marketing or to follow-up cannot be finalized until the client commits to a first-response time. The client should complete this during the first 14 days. Gate: Attribution of poor conversion to marketing or to follow-up stays blocked until this is closed.	measurement Days 1-14	Client	Medium	Low	The committed first-response time for a new lead recorded Unblocks: attribution of poor conversion to marketing or to follow-up.
Obtain whether a crm is in use, and which one. Finding: Whether a CRM is in use, and which one is not on file. What it means: Whether a CRM is in use, and which one is not currently available. Revenue attribution by campaign and buyer question cannot be finalized until the client confirms the CRM in use, or that there is none. The client should complete this during the first 14 days. Gate: Revenue attribution by campaign and buyer question stays blocked until this is closed.	measurement Days 1-14	Client	Medium	Low	Whether a CRM is in use, and which one recorded Unblocks: revenue attribution by campaign and buyer question.
Obtain the typical time from first contact to closed business. Finding: The typical time from first contact to closed business is not on file. What it means: The typical time from first contact to closed business is not currently available. When the first revenue decision gate can be read cannot be finalized until the client provides a typical sales cycle length. The client should complete this during the first 14 days. Gate: When the first revenue decision gate can be read stays blocked until this is closed.	measurement Days 1-14	Client	Medium	Low	The typical time from first contact to closed business recorded Unblocks: when the first revenue decision gate can be read.
Obtain access to existing customer records for profile validation. Finding: Access to existing customer records for profile validation is not on file. What it means: Access to existing customer records for profile validation is not currently available. Confirming the priority buyer profiles cannot be finalized until the client shares customer records, or confirms none can be shared. The client should complete this during the first 30 days. Gate: Confirming the priority buyer profiles stays blocked until this is closed.	measurement Days 1-30	Client	Medium	Low	Access to existing customer records for profile validation recorded Unblocks: confirming the priority buyer profiles.
Publish one answer to "best free ai tools for content writing" and measure whether it reaches the engines and the search results. Finding: Measured demand exists without a strong brand position. Demand is measured but the evidence to fund a full campaign is not yet there. What it means: Worth testing rather than funding. A contained organic test costs time rather than budget and produces the evidence a decision needs. Gate: If the page reaches the engines and draws impressions within 30 days, this cluster moves into the funded plan. If not, it is dropped rather than repeated.	geo_ai_content Days 7-30	Agency	High	Low	Qualified visibility and primary conversion Hypothesis, not a forecast: the test produces the evidence, and the evidence decides whether this becomes a campaign.
Publish one answer to "using ai for content creation" and measure whether it reaches the engines and the search results. Finding: Measured demand exists without a strong brand position. Demand is measured but the evidence to fund a full campaign is not yet there. What it means: Worth testing rather than funding. A contained organic test costs time rather than budget and produces the evidence a decision needs. Gate: If the page reaches the engines and draws impressions within 30 days, this cluster moves into the funded plan. If not, it is dropped rather than repeated.	geo_ai_content Days 21-44	Agency	Medium	Low	Qualified visibility and primary conversion Hypothesis, not a forecast: the test produces the evidence, and the evidence decides whether this becomes a campaign.

BEFORE LAUNCH Instrument The approved plan carries no dated work for this window. Extend the plan across the full window, or shorten the analysis window to match the plan.	DAYS 1-30 Awareness and Initial Engagement Increase brand visibility and awareness in AI content platform discussions.; Capture market share by addressing a key comparison question.; Capture market share by addressing a key comparison question.; Capture market share by addressing a key comparison question.
DAYS 31-60 Consideration and Education Educate the target audience on choosing the right AI content platform.; Build authority and trust by showcasing successful use cases and customer satisfaction.; Build authority and trust by showcasing successful use cases and customer satisfaction.; Build authority and trust by showcasing successful use cases and customer satisfaction.	DAYS 61-90 Conversion and Trust Building Convert trial users to paid plans and build trust through testimonials.; Build authority and trust by showcasing successful use cases and customer satisfaction.; Build authority and trust by showcasing successful use cases and customer satisfaction.
Management rule Review against the baseline monthly and change one variable at a time, so a movement can still be attributed.	

KPI & Measurement System

WHAT SUCCESS SHOULD MEAN

Layer	KPI	Baseline in report	Near-term direction	Target type	Owner
Commercial	Campaign Intelligence Score Below 40 at the next scan, spending is held and the blocking conditions are worked instead.	12	12 → 27	Evidence-based 11 of 14 measured buyer questions have a traced, executable opportunity behind them (79%). The target assumes the plan wins roughly half of them within 180 days.	GeoRepute
Authority	GEON score If the weakest pillar has not moved by day 90, effort shifts to it from wherever it currently sits.	31	31 → 46	Historical Projected from this brand's own movement across 8 recorded GEON snapshots.	GeoRepute
Visibility	AI engine visibility No movement by day 90 means the published answers are not being indexed, and distribution changes.	0%	0% → 4%	Evidence-based 11 of 14 measured buyer questions have a traced, executable opportunity behind them (79%). The target assumes the plan wins roughly half of them within 180 days.	Agency
Demand	AI recommendation share Flat share with rising visibility means the gap is proof, not coverage, and the proof plan is brought forward.	6.7%	6.7% → 17%	Evidence-based 11 of 14 measured buyer questions have a traced, executable opportunity behind them (79%). The target assumes the plan wins roughly half of them within 180 days.	Agency
Visibility	Share of voice in AI answers A fall means a competitor is gaining; the competitive counter-moves are triggered.	0%	0% → 4%	Evidence-based 11 of 14 measured buyer questions have a traced, executable opportunity behind them (79%). The target assumes the plan wins roughly half of them within 180 days.	Agency
Visibility	Organic clicks (window) Below plan at day 60, the near-growth queries are re-prioritised ahead of new content.	27	27 → 36	Planning hypothesis Improvement band applied to a measured baseline of 27. This is a proposed target, not a measured entitlement, and should be validated against the first 30 days of data.	Client
Visibility	Average organic position Deterioration triggers a technical and content review before more is published.	9.7	9.7 → 7.3	Planning hypothesis Improvement band applied to a measured baseline of 9.7. This is a proposed target, not a measured entitlement, and should be validated against the first 30 days of data.	Client
Conversion	Decision leakage If the worst stage has not improved by day 90, content is reallocated to it from earlier stages.	100	100 → 85	Planning hypothesis Improvement band applied to a measured baseline of 100. This is a proposed target, not a measured entitlement, and should be validated against the first 30 days of data.	Agency
Commercial	Search cost exposure If it does not fall, organic coverage of the expensive clusters is escalated over paid coverage.	Not measured	No baseline	Directional goal No baseline was measured, so no figure can be defended. The target for this cycle is to establish one.	Campaign Manager

No invented targets: Every target states its type and the basis it was derived from. A directional goal carries no figure, because none can be defended.

Measured

Counted directly from a source: engine responses, Search Console rows, competitor mentions. A measured figure can be reproduced from the underlying data export.

Modelled

Computed from measured inputs through a documented formula: scores, gaps, allocations. The inputs are real; the composition is ours.

Estimated / Predicted

A forward-looking figure derived from measured inputs plus a stated assumption. Directional, never a promise, and never used where a measured value exists.

Source limitation: Keyword research: 302 keywords, collected before country targeting existed, so the volumes are worldwide rather than this brand's market

What is missing

→ Nothing required is missing.

What is decision-ready

→ Trust

→ Roadmap

→ Authority

→ Ai Vs Google

→ Action Center

→ Ai Visibility

→ Competitive Gap

→ Geon Assessment

→ Narrative Break

→ Cpc Intelligence

Provenance 834 of 884 statements in this case are derived from your data or name an absence in it; 50 are this template's standing wording.

What each metric means

Told apart. These figures look alike and answer different questions. Each one states the formula it came from, so any number in this document can be checked against its definition.

Buyer questions tested

Formula: Prompt x engine runs completed in the window · AI Visibility Scan · 90 days

Buyer questions tested is reported from AI Visibility Scan over 90 days.

What to do: Track this reading against the next measurement cycle.

108

AI Visibility

Formula: Answers mentioning the brand / answers tested · AI Visibility Scan · 90 days

AI engines rarely mention the brand when buyers ask about this category. The brand is not part of the conversation where the decision starts.

What to do: Publish answers to the specific buyer questions being tested, on pages the engines already cite, before spending on paid reach.

0%

was 0%

Top-3 Placement

Formula: Answers placing the brand in the top three / answers tested · AI Visibility Scan · 90 days

The brand is named but almost never placed among the leading options. Buyers see it as an also-ran rather than a candidate.

What to do: Build the comparison and proof assets that move a brand from mentioned to shortlisted, and target the questions where ranking is explicit.

3.7%

Recommendation Share

Formula: Brand top-three placements / (brand + competitor top-three placements). One brand placement per answer against up to three competitor placements, so the scale is not 50% for parity · AI Visibility Scan · 90 days

When engines recommend someone, it is usually a competitor. Demand is being captured, but not by this brand.

What to do: Target the competitors holding those recommendations directly, with comparison content and the proof their buyers ask for.

6.7%

was 6.7%

Share of Voice

Formula: Brand mentions / (brand + competitor mentions) across all measured answers · AI Visibility Scan · 90 days

Competitors are mentioned far more often than the brand across measured answers.

What to do: Share of voice is zero-sum: gains require displacing a competitor from answers they hold today.

0%

was 0%

Competitor-only answer rate

Formula: Questions answered with a competitor and without the brand / distinct questions tested · AI Visibility Scan · 90 days

Competitor-only answer rate is reported from AI Visibility Scan over 90 days.

What to do: Track this reading against the next measurement cycle.

100%

Competitor-dominated questions

14

Formula: Distinct buyer questions where a competitor appeared and the brand did not. A competitor counts as present from any of: named in competitors_found, present in competitor_contexts, or a non-zero competitor mention count · AI Visibility Scan · 90 days

Competitor-dominated questions is reported from AI Visibility Scan over 90 days.

What to do: Track this reading against the next measurement cycle.

Citation Share

0%

Formula: Citations pointing at the brand's own domain / all citations returned with the answers · AI Visibility Scan (answer citations) · 90 days

Engines rarely cite the brand's own pages when they answer. Others are supplying the information buyers act on.

What to do: Publish the source material engines prefer to cite: original data, clear methodology pages and specific answers to buyer questions.

Competitive Exposure

100

Formula: 0.5 x (100 - share of voice) + 0.5 x competitor-only answer rate · GeoRepute composite · 90 days

Competitors control most of the surfaces where buyers make decisions in this category.

What to do: Pick the two surfaces with the highest commercial intent and contest those before broadening.

Decision Leakage

100

was 100

Formula: Weighted share of measured journey stages where the brand is absent, weighted toward the stages closest to a decision · AI Visibility Scan, by journey stage · 90 days

Buyers pass through several stages of their decision without encountering the brand. Demand is being created and lost before any campaign reaches it.

What to do: Cover the missing stages in order of proximity to the decision; the last stages leak the most value.

Campaign Intelligence Score

12

was 12

Formula: Weighted mean of GEON (30%), AI visibility (25%), recommendation share (20%), inverted cost exposure (15%) and share of voice (10%), renormalised over whatever was measured · GeoRepute composite · 90 days

The measured foundations for a campaign are weak. Spending now would buy traffic into an unprepared position.

What to do: Close the blocking conditions before committing media budget.

GEON Score

31

was 31

Formula: 0.22 visibility + 0.18 authority + 0.18 context + 0.15 trust + 0.15 consistency + 0.12 market fit, less penalties · GEON engine · 90 days

The brand's machine-readable footprint is thin across visibility, authority, context, trust, consistency and market fit.

What to do: Work the two lowest pillars first; they carry the most headroom per unit of effort.

Organic clicks

27

was 27

Formula: Total clicks across all measured queries in the window · Google Search Console · 90 days

Organic clicks is reported from Google Search Console over 90 days.

What to do: Track this reading against the next measurement cycle.

Organic impressions

578

Formula: Total impressions across all measured queries in the window · Google Search Console · 90 days

Organic impressions is reported from Google Search Console over 90 days.

What to do: Track this reading against the next measurement cycle.

Average organic position

9.7

was 9.7

Formula: Impression-weighted mean position across all measured queries · Google Search Console · 90 days

Average organic position is reported from Google Search Console over 90 days.

What to do: Track this reading against the next measurement cycle.

Search cost exposure

Not measured

Formula: Index of how much of the brand's relevant demand has to be bought rather than earned · Search cost intelligence · 90 days

No keyword cost snapshot is available for this domain and market.

What to do: Collect the missing input before this metric is used to justify a decision.

Annual cost of search absence

\$3,688

Formula: Sum over gap keywords of CPC x monthly volume x 12 x organic gap factor · Search cost intelligence (DataForSEO CPC) · 90 days

Annual cost of search absence is reported from Search cost intelligence (DataForSEO CPC) over 90 days.

What to do: Track this reading against the next measurement cycle.

Estimated opportunity (low)

\$4,270

Formula: 854 clicks a year currently going elsewhere, across 22 priced terms; Click-through rate 8.0%, a published benchmark because Search Console holds too little top-three traffic to measure one; Conversion rate 2.50% and deal value 200 to 2,000, both as the business stated them · GeoRepute model · 90 days

Estimated opportunity (low) is reported from GeoRepute model over 90 days.

What to do: Track this reading against the next measurement cycle.

Estimated opportunity (high) Formula: 854 clicks a year currently going elsewhere, across 22 priced terms; Click-through rate 8.0%, a published benchmark because Search Console holds too little top-three traffic to measure one; Conversion rate 2.50% and deal value 200 to 2,000, both as the business stated them · GeoRepute model · 90 days Estimated opportunity (high) is reported from GeoRepute model over 90 days. What to do: Track this reading against the next measurement cycle.	\$42,700
Monthly marketing budget Formula: As stated by the client · Client intake · 90 days Monthly marketing budget is reported from Client intake over 90 days. What to do: Track this reading against the next measurement cycle.	\$3,000
Average transaction value Formula: As stated by the client · Client intake · 90 days Average transaction value is reported from Client intake over 90 days. What to do: Track this reading against the next measurement cycle.	\$474
Target CPA Formula: As stated by the client · Client intake · 90 days Target CPA is reported from Client intake over 90 days. What to do: Track this reading against the next measurement cycle.	\$150
Target CPL Formula: As stated by the client · Client intake · 90 days Target CPL is reported from Client intake over 90 days. What to do: Track this reading against the next measurement cycle.	\$25
Close rate Formula: Qualified leads that become customers / qualified leads · Shared revenue inputs · 90 days Close rate is reported from Shared revenue inputs over 90 days. What to do: Track this reading against the next measurement cycle.	2.5%
Intelligence sources carrying data Formula: Connected sources that also returned usable rows in this window, out of 8. A source that is connected but returned nothing is not counted · GeoRepute data readiness · 90 days Intelligence sources carrying data is reported from GeoRepute data readiness over 90 days. What to do: Track this reading against the next measurement cycle.	8

SOURCE-DERIVED

Figures are directional and derived from the sources named in the scope strip. Nothing here is audited financial data.
